## Technical Skills

- **Languages:** Typescript, JavaScript (ES6+), HTML5, CSS
  - **Frontend:** React.js, Next.js, Tailwind CSS, Bootstrap, Tanstack Query
  - **Backend:** Node.js, Express.js, NestJS
  - **Database:** PostgreSQL, MongoDB
  - **Tools & Platforms:** GitHub, Figma, Linux, Postman, Netlify, Render
- 

## Experience

### Sewaverse | Frontend Development Intern - June 2025 - October 2025

- Built and maintained **3+ scalable admin modules** including user management, industry management, and booking management, used by internal operation teams.
- Developed reusable UI components with **sorting, filtering, pagination, and CRUD functionality**, improving data handling efficiency and usability.
- Integrated frontend with backend services using **TanStack Query** to ensure predictable data fetching, caching and error handling.
- **Collaborated with the team** to design & refine APIs to ensure seamless frontend integration.
- Improved system design and usability by contributing on **UI/UX design** improvements and creating a **design system** to standardize layouts and components using **Figma**.

**Technologies Used:** Next.js(Typescript), Tanstack Query, Figma, GIT, Development Environment(Linux)

### Thulo.com | Backend Development Intern - December 2024 - March 2025

- Assisted frontend developers by implementing **server-side data handling** and stored processed results in variables/templates to simplify frontend integration, reducing their backend dependency during UI implementation.
- Developed secure **authentication and authorization** systems for data protection.
- Created **RESTful APIs** using Laravel.

**Technologies Used:** PHP(Laravel), Javascript

---

## Projects

### Room Finder (Room Management System) - FullStack Application

- Developed a fullstack system with **search and recommendation feature**.
- Designed modular backend architecture and built **RESTful APIs** using **Express.js** with role-based access control.
- **Integrated APIs** with a React frontend using **Tanstack Query**, for a consistent and predictable data flow and error handling.
- Deployed the **frontend** on **Netlify**, set up a **custom subdomain** to redirect traffic to the frontend, and hosted the **backend** on **Render** while managing the **database** on **Neon**.

### Notes API — NestJS Backend (Learning Project)

- Implemented a **RESTful Notes API** using **NestJS**, following best practices with **controllers, services, modules, and DTOs**.
- Built **JWT-based authentication and authorization** with email/password login and **Bearer token** protection for CRUD endpoints.
- Applied **DTO validation** and structured request/response handling for cleaner API contracts.
- Documented and tested APIs using **Swagger (OpenAPI)**.
- Used **Nest CLI** for project scaffolding and configuration management.

### Chefmandu (Recipe Management System) - FullStack Web Application

- Built a **CRUD-based recipe management application** using core web technologies.
  - Implemented **AJAX-based dynamic comments**, improving user interaction **without full page reloads**.
- 

## Education

**Southwestern State College** - Bachelor in Computer Applications (BCA), 2021-2025
